

If pigeons are inside someone's roof space then our Pest Control Service will come and remove any birds that have been trapped inside. This can only be done after repairs have been carried out to replace missing slates or damaged fascia / underboarding through which they have been entering the roof.

We also provide a chargeable service of fixing proofing spikes to window ledges, pipe work and ornamental features. These spikes physically prevent pigeons landing on treated areas without causing them any injury; they simply have to find somewhere else to roost.

This service is limited due to working height restrictions and is normally reserved to ordinary sized two storey properties.

We can also sell proofing spikes to members of the public. They are sold in various widths and are sold in lengths of three per metre, thirteen inches each. Advice on their fixing will be provided.
