Solar panels

Last Modified April 29, 2026

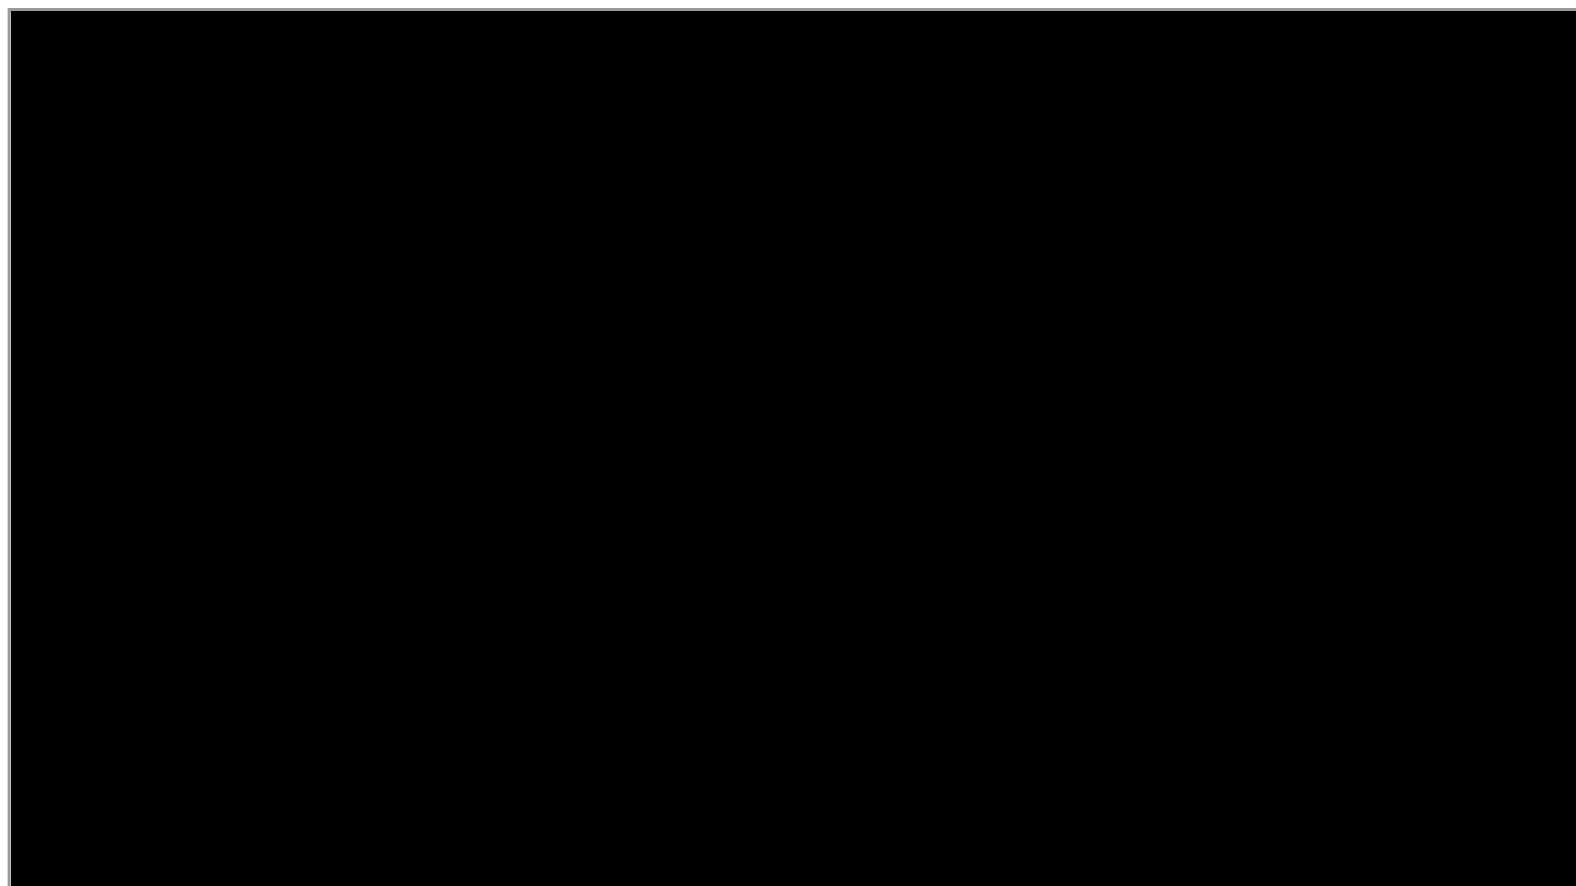

Sustainable energy for a sustainable home

Solar panels not only reduce your electricity costs but also generate renewable energy, benefiting both your wallet and the planet. With nearly 1.5 million solar installations across the UK as of early 2025, solar power is becoming a popular choice for homeowners.

Solar panels can significantly lower your electricity bills. For a typical three-bedroom house, you could save around £16,750 over 25 years.

As of 2024, solar panels are subject to 0% VAT, saving you money. Battery storage allows you to use solar electricity when your panels aren't generating energy, reducing the need to buy electricity during peak times.
