Household battery collections

Last Modified July 03, 2023

A vast amount of single use batteries are often discarded in the general waste bin, which sees them end up in landfill or at an energy waste facility.

This can cause long-lasting, damaging effects to the climate, as chemicals including:

- Lead
- Cadmium
- Zinc
- Lithium
- Mercury

From **22 March 2021** residents are able to present household batteries for recycling along with their household waste collection.

How we will collect

Residents should put their dead batteries in a tied plastic bag and place this on top of their **grey bin** for the usual fortnightly collection date.
